

Filters

Filters are used to deselect the lines you don't want. The most common filters are already there for you. More can be chosen by touching the + button. Notice that as you add Filters the number of lines in the Scratchpad decreases.

Some filters have a submenu with At Most, Exactly, and At Least selections. The number is also selectable.

AIRCRAFT CHANGES

Number of scheduled aircraft changes in that line

AIRCRAFT TYPES

Number of legs on a 300

Number of legs on a 500

Number of legs on a 700

Number of legs on an 800

Classic % - Percentage of legs in a 300/500

Next Gen % - Percentage of legs in a 700/800

BLOCK OF DAYS OFF

Days off in a row

BLOCK HOURS

Block time of that line

CITIES

Use the three-letter airport code

Overnight City is where you spend the night

Leg City

 Trip passes through this city

 Useful for splitting trips or jetway trades

Regional Overnight Cities

Multiple East Coast, West Coast and International Cities are preselected. Tap the Cities box and check/uncheck Cities that you want selected. Use this Filter to select more than one city. Use the Presets function to save all of your selected cities for next month, if desired.

Example: Say you want a specific number or as many West Coast overnights as possible. Tap Regional Overnight Cities → West Coast. Tap the Cities box. Notice we preloaded Western Cities. If there are a few you don't like, simply uncheck them. Tap At Least and then tap the

number button. Select, say 8 or 10 or 12. At Least 8 will put more lines in the Scratchpad than At Least 12. Trips with the checked Cities will be highlighted.

COMMUTING

Earliest Departure

Enter the time of the earliest departure time of the trip. Don't forget to leave yourself enough time for check-in.

Check the current flight schedule to see when you can be in base

Latest Arrival

Enter the latest time you can arrive to catch your commuter flight

Check the current flight schedule for your commuter flight home

Tap the Calculate button after entering your times. Save as a Default for next month

If your commute is a long drive you could enter a time that suits your needs

DAYS OF THE MONTH

Days I want off

Tap the days you do not want to work

Days I Want to Work

Tap the days you want to work

DAYS OFF

Total number of days off

Days of the Week

Choose how many of each day you want to work or have off. Weekends are Sat and Sun

DEADHEADS

Deadheads

The total number of deadheads in the line

DH at start TO

DH at the start of the pairing to a city

If you Tap the city box a list of cities will pop up. These are the cities with a DH from the base to that city for the first leg. If you leave the city box blank, you will see all the lines with deadheads on the first leg.

DH at end FROM

DH at the end of the pairing from a city.

If you Tap the city box a list of cities will pop up. These are the cities with a DH from that city back to the base. If you leave the city box blank, you will see the lines with deadheads on the last leg.

DH at Either

If you Tap the city box a list of cities will pop up. These are the cities with a DH from the base TO that city for the first leg OR a DH FROM that city on the last leg. If you leave the city box blank, you will see the lines with deadheads on the first leg OR the last leg.

DUTY HOURS

Number of hours on duty

LEGS

Total number of legs for the month

MAX LEGS IN A DAY

Total number of legs on a particular day

OVERLAP DAYS

Number of days the last pairing overlaps into the next month

OVERNIGHT LENGTH

The length of the overnights in hours. This calculation ignores turns, since their overnight length is always zero, unless the line is entirely made up of turns

OVERNIGHTS IN BASE

Number of nights in between back-to-back trips (for example, on a back-to-back two-day the value would be 1)

PASSES THROUGH BASE

Number of times you will pass through your base during the month

PAY

Amount added to your wallet as a result of the trip

TAFB HOURS

Time away from base

NUMBER OF TRIPS

Number of trips for the month

TRIP LENGTH

Number of turns, 2 days, 3 days, or 4 days (4 days N/A for Flight Attendants)

WORKDAYS

Number of days at work

Sorts

Use sorts to reorder the lines in the Scratchpad. Tap the switch to sort High to Low or Low to High. The top sort is the first parameter the app sorts by. Second in the list is second and so on. You can change the order of the Sorts by holding down the === on the right side and dragging.

For example, say you want to sort by highest number of turns and pay. **The order in which you select turns and pay makes a big difference.**

If pay (high to low) is the top sort and turns is second, the Scratchpad will have the lines that pay (high to low) listed first. Then, when two lines pay the same, the one with more turns will be listed first.

On the other hand, if turns is the top sort and pay is second, the Scratchpad will have the lines with the most turns first. Then, when two or more lines have the same number of turns, they will be sorted by pay.

AIRCRAFT CHANGES

Lowest or highest number of aircraft changes

AIRCRAFT TYPE

Lowest or highest number of legs on a 300

Lowest or highest number of legs on a 500

Lowest or highest number of legs on a 700

Lowest or highest number of legs on an 800

Lowest or highest percentage of legs in a 300/500

Lowest or highest percentage of legs in a 700/800

AM/PM

AM then PM

AM's first followed by PM's

PM then AM

PM's first followed by AM's

BLOCKS OF DAYS OFF

Lowest or highest number of days off in a row

BLOCK TIME

Lowest or highest block time

Cities

Overnights

Add the city code and tap the High to Low switch to get the most or least Overnights in the city you selected

Legs Thru

Add the city code and tap the High to Low switch to get the most or least Legs Through the city you selected. Useful for splitting a trip or jetway trades.

Regional Overnight Cities

Multiple East Coast, West Coast and International Cities are preselected. Tap the Cities box and check/uncheck Cities that you want or don't want selected. Sort them Low to High or High to Low

Use this Sort to select more than one city. Use the Presets function to save all of your selected cities for next month, if desired

Example: Say you want as many West Coast overnights as possible. Tap Regional Overnight Cities → West Coast. Tap the Cities box. We preloaded Western Cities. If there are a few you don't like, simply uncheck them. Tap the High to Low switch and line with the most West Coast overnights will float to the top of the Scratchpad. Notice trips with at least one West Coast Overnight will be highlighted

DAYS OF THE WEEK

Select Low to High to minimize or maximize which days of the week you want to fly

Example:

Weekends low to high means you want to fly the least number of weekends

Tuesdays high to low means you want to fly the most Tuesdays

DAYS OFF

Lowest or highest number of days off

DEADHEADS

Deadheads

Lowest or highest number of deadheads

DH at Start

Lowest or highest number of DH on the first leg

If the city box is blank the sort will be for ALL DH at Start

If the city is selected the sort will be for all DH from the base to the selected city on the first leg of the pairing

DH at End

Lowest or highest number of DH on the last leg

If the city box is blank, the sort will be for ALL DH at End

If the city is selected, the sort will be for all DH from the selected city to the base on the last leg

DH at Either

Lowest or highest number of DH on the first OR last leg

If the city box is blank, the sort will be for ALL DH on the first OR last legs

if the city is selected, the sort will be for all DH from the selected city to the base on the first OR last leg of the pairing

DUTY TIME

Lowest or highest hours and minutes on duty. This is your actual time on duty not Time Away From Base (TAFB).

EARLIEST DEPARTURE

Low to high finds the single pairing with the earliest departure time (Low = Early)

High to low finds the single pairing with the latest early departure time (High = Late)

LATEST ARRIVAL

Low to high finds the single pairing with the earliest late arrival time (Low = Early)

High to low finds the single pairing with the latest arrival time (High = Late)

LEGS

Lowest or highest number of legs for the month

MAX LEGS IN A DAY

Lowest or highest number of legs on a given day

OVERNIGHTS IN BASE

Lowest or highest number of overnights between back-to-back trips. Turn lines will have the highest number.

OVERNIGHT LENGTH

Min O-Nite Length: The minimum overnight length in hours for the line. This calculation ignores turns unless the line is entirely made up of turns.

Max O-Nite Length: The minimum overnight length in hours for the line. This calculation ignores turns unless the line is entirely made up of turns.

Example: Imaginary Line 1 has three two-day trips comprising six overnights of 12, 13, 12, 16, 15, and 14 hours. The minimum overnight length for Line 1 is 12 hours and the maximum is 16 hours.

PASSES THROUGH BASE

Lowest or highest number of times you will pass through your base

PAY

Lowest or highest total number of trips for pay

PAY PER BLOCK HOUR

Total pay divided by block hours

PAY PER DAY

Total pay divided by number of days worked

PAY PER DUTY HOUR

Total pay divided by number of hours on duty

PAY PER LEG

Total pay divided by total number of legs

PAY PER TAFB

Total pay divided by time away from base

POSITION (FLIGHT ATTENDANT ONLY)

Quick Add Positions A-B-C

Adds all lines in the scratchpad to the Bid List in A-B-C order. If you'd rather bid B-C-A order, just drag the positions to B-C-A order.

This is the easiest way to reorder your scratchpad lines by Positions

Position A

Adds A Position first. Then B, then C

Position B

Adds B Position first. Then A, then C

Position C

Adds C Position first. Then A, then B

Position D

Adds D Position first. Then A, then B, Then C

If there are no D positions for a particular line it defaults to A-B-C

TAFB

Lowest or highest time away from base

TRIP LENGTH

Lowest or highest number of turns, two days, three days, or four days.

Example:

Three day trips > Low to High will produce lines with 0 three days, then 1 three day, then two, three, four and maybe five in some months.

TRIPS

Lowest or highest number of trips in the month. Turn lines will have the highest number of trips.

WORK DAYS

Lowest or highest number of days at work.

Presets

The Preset button is used to save your chosen filters, sorts, Regional Overnight Cities and Line Values. You can have more than one Preset. A saved Preset will carry over to next month.

Example:

If your first choice is to fly Mon, Tue, Wed, PM's, sorted by Pay, you should deselect Reserve and Blank lines, AM lines, Sun, Thu, Fri, Sat. From the Sorts button select pay and then pay again from the submenu. Select Presets > + New Preset with current settings. Give your Preset a name. Let's call it "1st Choice." Notice the "Loaded" button is active. Use the double arrow button (>>) to move the lines in the Scratchpad to the Bid List.

My second choice is to add Sundays.

From the Filters button select Sun. Select Presets > + New Preset with current settings > name it "Add Sundays". Use the >> to move those lines from the Scratchpad to the Bid List.

Next month you will have your top two bidding preferences are already preset for you. Simply select Presets > load "1st Choice", and use the double arrow button (>>) to move those lines to the Bid List. Now load "Add Sundays", and again use the double arrow button (>>) to move those lines to the Bid List. Easy as pie.
