

SWAPtimizer

Please visit swaptimizer2.com for all of the latest developments regarding The SWAPtimizer.

What is the SWAPtimizer?

The SWAPtimizer is a tool to assist Southwest Airlines Pilots in optimizing their vacation-month bids. Using prediction algorithms and highly refined schedule data, the program can predict with good accuracy where each pairing that overlaps part of the vacation block will be split by Crew Planning, which allows you to see (and bid with knowledge of) what the total vacation pay will likely be.

All of the information about how the overlap is calculated, how vacation pay can be affected by overlap, and how accurate the predictions are can be found at swaptimizer2.com/faq

Does SWAPtimizer project Round Two vacation overlap?

Yes. One caveat though. Some round two lines contain trips for which the company does not provide us detailed trip information. When a line contains one of these trips we display a warning symbol.

I have vacation but the yellow bar is not showing up in the Scratchpad.

Update CrewBid to the latest version by tapping the App Store app → type CrewBid in the search box and update CrewBid. Now re-download the bid package you are working on by opening CrewBid → + → enter your employee number, base, crew position, and round.

A “Data Not Yet Available” message popped up.

It takes a few hours after Crew Planning releases the lines for SWAPtimizer to run its calculations. Tap the Bid Actions button (square with the arrow) in the right corner of the menu bar → tap SWAPtimizer → tap Check for SWAPtimizer file. CrewBid will check the SWAPtimizer server and download the SWAtimized bid package if it is available.

Subscriptions

Do I have to buy two subscriptions?

Yes. You will need a subscription to SWAPtimizer and a subscription to CrewBid. For a more seamless experience, we suggest you purchase your subscription to SWAPtimizer before you download the current bid package with CrewBid.

These are separate subscriptions.

Scratchpad

So the yellow bar is my vacation week?

Correct.

How can I hide Overlapping trips?

Long press on the yellow bar. You will be presented with a menu that allows you to hide all overlapping trips, hide the front overlap, hide the back overlap, and show all overlapping trips if you'd like to see them after hiding them.

A long press means touching the yellow bar for about ½ second.

Why are some of the Line Values blue and some are black?

The blue line values are SWAPtimizer specific. The black line values are the same ones you have when using CrewBid on a non-vacation month. All black line values have been recalculated to take into account dropped trips.

Symbology in the Scratchpad view

- \$ - Day is fully paid
- ¢ - Day is partially paid
- x - Day is not paid
